

Your HIPAA compliance
is not the problem.
Proving it manually
to every hospital
buyer is.

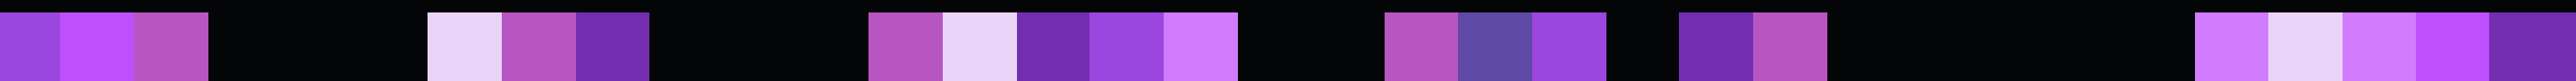

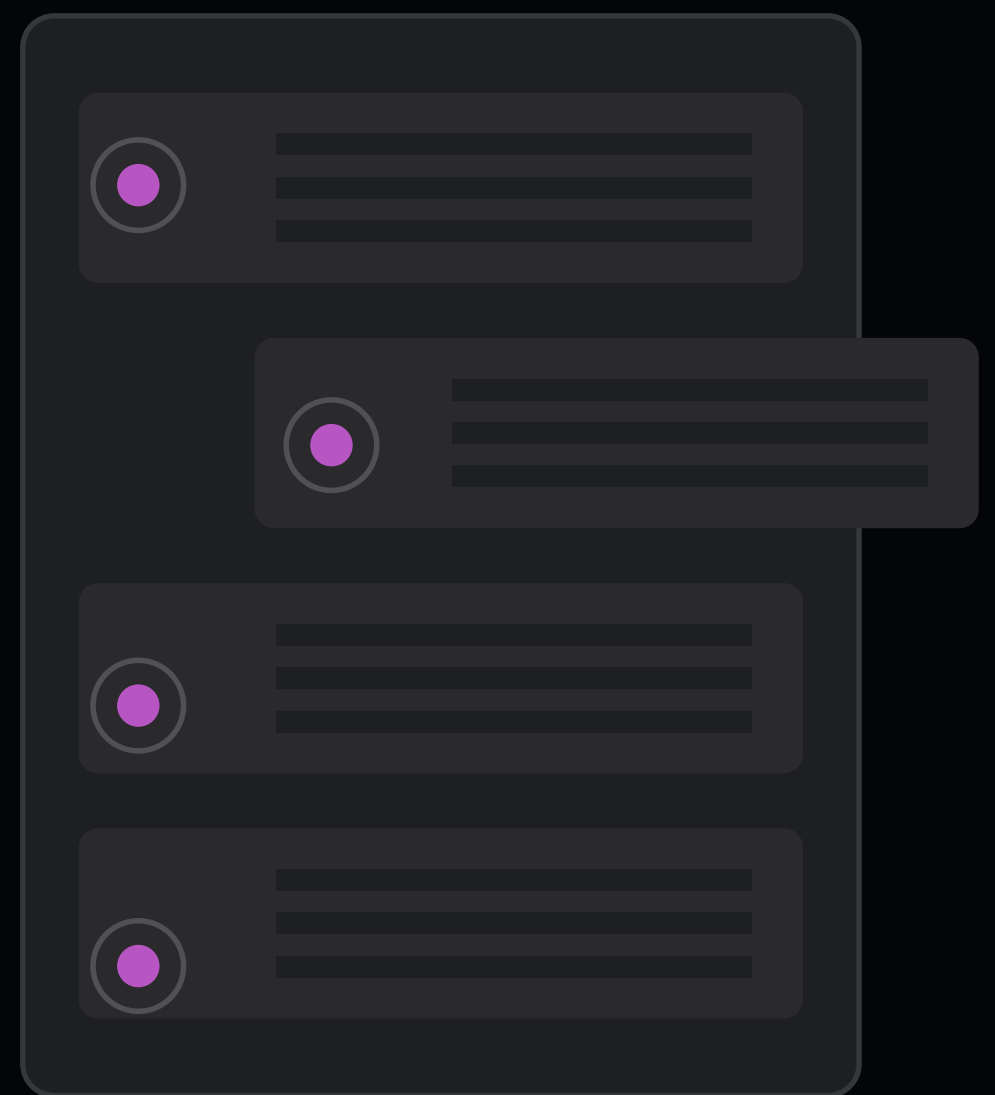

Powered by
VeUP Sell

Every hospital system sends a different security questionnaire.
Each one takes 40+ hours to complete.
Legal review adds 6–12 weeks.

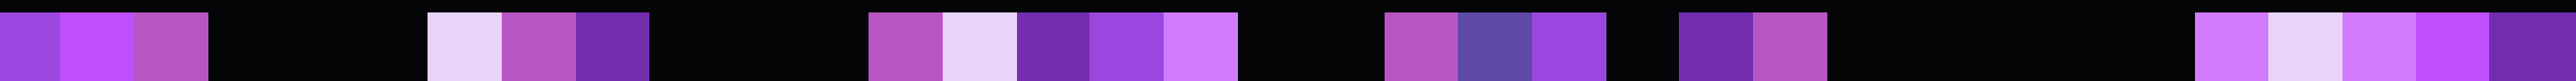

That is where your 24-month procurement cycle comes from.
Not the product. The process.

AWS Marketplace Vendor Insights automates that documentation.

- HIPAA
- HITRUST
- SOC 2 Type II
- GDPR

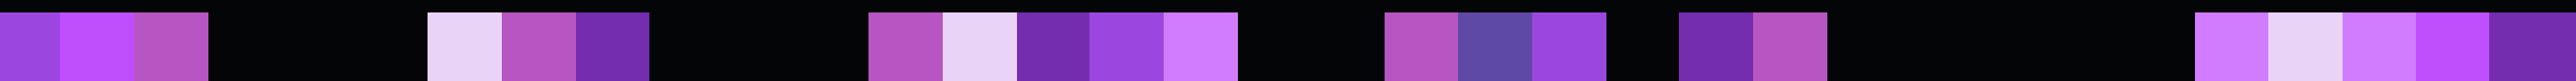

On file. Before the conversation starts.
That removes 8 or more months from
the front of every deal.

Hospital CISOs already trust AWS infrastructure.

When your solution is on Marketplace, that trust transfers. Security reviews shorten from quarters to weeks. Not because you proved your security posture.

Because AWS already did.

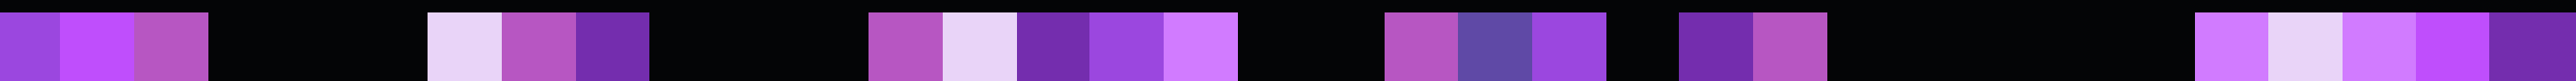

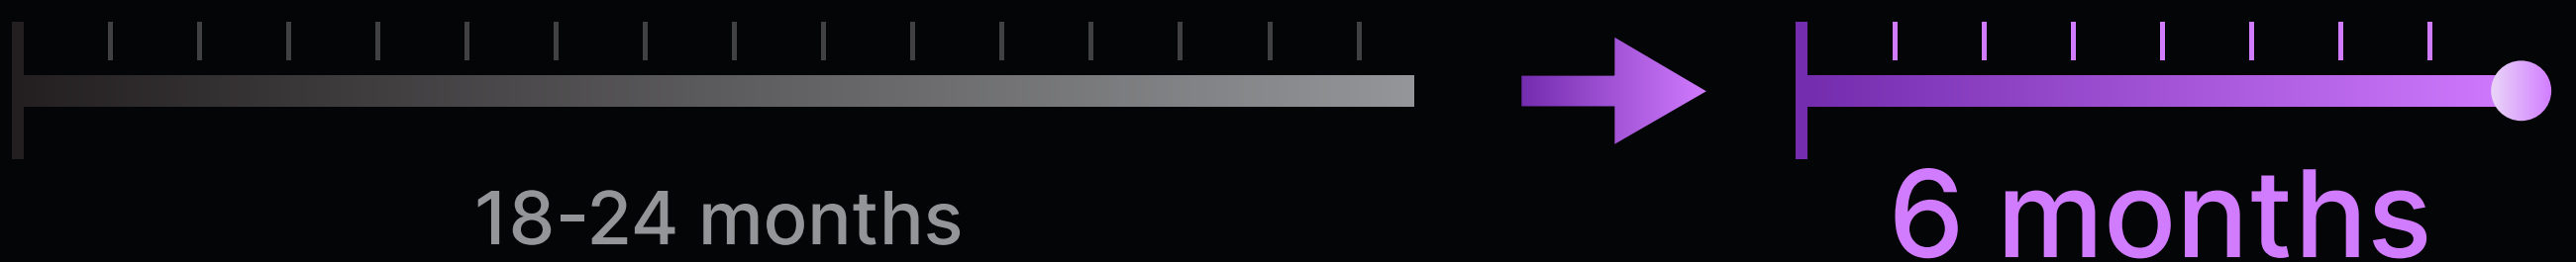

The ISVs already listed on Marketplace with Healthcare Competency status are already in the co-sell motion.

The ones that are not listed are still in discovery.

Still answering questionnaires.

18 to 24 months. Down to six.

That is the gap.

We wrote the full breakdown.

How to list, how to get Healthcare Competency status, and how to activate the AWS funding programs hospital buyers respond to.
