

How We Go

Beyond Cloud in 2026

AWS in 2026: The Partner Gap

AWS needs stronger partner skills, not stronger technology. The advantage comes from partners who translate AI intent into production usage and make cost controls fuel growth, not slow it down.

AI Adoption at Scale

Challenge:

73% of ISVs plan AI, but most underestimate the work. The gap isn't code, it's evaluation complexity.

Impact:

Teams spend 3-6 months answering production questions that demos gloss over. Most never get the evaluation rigor right, so they either ship something subpar or kill the project entirely.

Migration + Modernization + FinOps

Challenge:

70% of cloud migrations exceed budget, and post-migration optimisation often slips. Without a unified FinOps model, spending remains volatile, and funding for modernization becomes tight.

Impact:

Customers land on AWS inefficiently, burn budget, delay growth and waste valuable time they could be using to improve their product.

Co-Sell & Marketplace Friction

Challenge:

Partners are stuck in the 'waiting room.' Co-sell onboarding takes 6-12 months, stalling momentum and forcing ISVs to sell direct or look elsewhere. Meanwhile, AWS AEs lose 40% of their week to admin instead of selling.

Impact:

Deals die in procurement. ISVs miss their window, AEs miss their quota, and millions in potential GMV never hits the Marketplace

Dream Partner Checklist

If AWS could build the dream partner, what would they look like?

Deploy's AI-led workloads in 60-90 days

- Launch production AI fast, with every deployment referenceable, governed, and repeatable across verticals.
- Not POCs; production systems on Bedrock, SageMaker, QuickSuite, MCP
- Governed, referenceable, repeatable across verticals - with every deployment becoming a reference case

Owens the full Migration + Modernization + FinOps loop

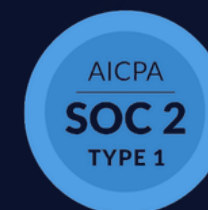

- Moves customers to AWS with efficiency built in
- Turn FinOps savings into funded AI and data projects that drive growth into higher-margin services
- Industry-specific playbooks (FinTech, HCLS, Industrial)

Improves co-sell velocity

- ACE/Salesforce integration that requires zero manual updates
- Handles private offer mechanics (MPPO, CPPO, tax)
- Operates as PDM extension, not just delivery partner

VeUP solves AWS's three biggest gaps in 2026.

OUR ORIGIN STORY

The VeUP Story

Once upon a time in Monaco, our founding team of entrepreneurs and investors saw the same pattern again and again: VCs and ambitious tech companies brimming with vision but stalling on execution.

In a venture ecosystem overflowing with capital and ideas, what was missing wasn't ambition; it was industry-specific guidance and hands-on delivery.

That's why we built VeUP.

Created by a team of investors, AWS alumni, and technical experts, VeUP was designed to close that gap - mapping business goals like fundraising, compliance, and exits directly to technical execution through our bespoke processes and industry-specialist teams.

Transform Cloud Capability Into Revenue

In 2025 we helped customers operate confidently on AWS by:

Landing efficiently
(FinOps + modernization from day 1)

Accelerating AI adoption
(production in 90 days)

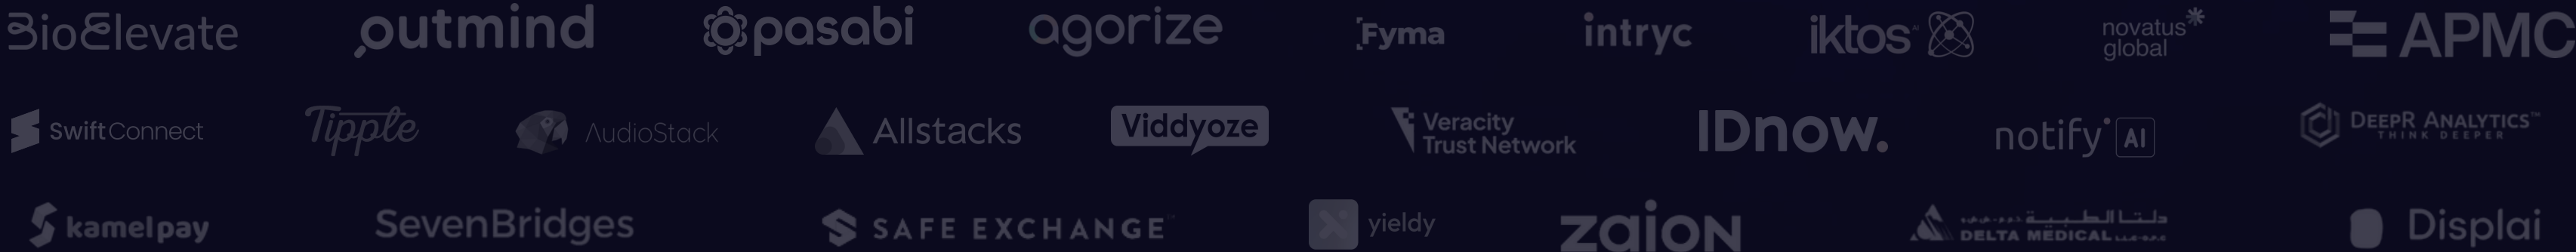

Scaling sustainably
(ecosystem enablement + long-term partnership)

As a result, we helped AEs globally build traction on their accounts. Customers saw ROI in Q1, expanded in Q2 and became reference cases by Q3.

Example:
"Customer A" migrated \$12M workloads → VeUP Ignite → Found \$3.2M waste → Reinvested savings in AI/data → Shipped Chatbot Project → Became AWS reference for Fintech

Timeline: 12 months
AWS Consumption Growth: 180%

Key Success Stories

Four VeUP customers have been acquired in the last 12 months after using Ignite to cut costs, extend runway, and modernize infrastructure, boosting their valuation and attractiveness to Investors.

Using VeUP Sell we replaced manual deal hygiene for a customer with **full co-sell automation**, tripling attach rates to 68% in under a month. This **meant zero manual maintenance** and \$2.1M of incremental pipeline identified in Q3.

Delivered cost visibility and rapid ROI for an AI Healhtech company, **saving 22% through Cost Optimizations**, funding multiple AI/Data projects in 90 days.

In just 60 days, we moved a customer from a vendor-dependent roadmap to a live, internal AI assistant. The Result was 40% fewer support tickets and **\$720K in annualized savings**, owned entirely by the client.

Where We **Deliver the Most Impact**

Hyperscale Scaleups (Series A-C), Growth-Stage ISVs, and Enterprises modernizing for AI adoption.

Baseline  Hippocratic AI  RAYSCAPE  Deepgram

Scaleups (Series A-C)

Venture-backed disruptors in regulated or complex sectors.

- Post-Series B pressure to show efficiency (burn rate) OR pre-Series C need to launch a “moat” feature (AI).
- Buyer: CTO (technical block) or Founder/CFO (burn rate anxiety).
- Must prove value fast (Series B) and scale fast (Series C+)

 MODULATE  integrate.ai  Allstacks

ISVs & Large SMBs

Mature product companies (\$5M–\$100M ARR).

- “The Plateau.” Growth has slowed, cloud bill is hurting margins, and competitors have launched AI features.
- Buyer: CPO (needs AI features), VP Sales (needs AWS leads), CFO (hates the AWS bill).
- Require deep AWS knowledge + Go-To-Market acceleration

 Vanta  Benchling  Jasper

Enterprise

Global organizations scaling on AWS.

- M&A integration (messy cloud estates), Global expansion (data sovereignty), or Board mandate for AI.
- Buyer: VP Infrastructure (chaos management), CDO (Chief Data Officer).
- Benefit from VeUP's experience in supporting businesses through IPO/Exit/Acquisition paths.

Beyond Cloud, **Accelerating Outcomes** for 2026

We have three productized programs that map to AWS funding priorities:

FinOps & AWS Cost
Optimization

Ignite

Migrations &
Modernization

AI-Led Solutions
(Agentic/AI/ML)

Build

GTM & Co-Sell
Enablement

Sell

What Our Programs Include

Every engagement is anchored to measurable business outcomes, not just consulting hours

FinOps & AWS Cost Optimization

- AI-led FinOps & Ops Analytics
- Technical Roadmapping
- Cost Optimization

Migrations & Modernization

- Landing Zones
- Data + App Migrations
- AI-led Integrated FinOps
- Governance + Guardrails
- IaC/CICD/DevOPSaaS
- Audit and compliance
- Report Measurable Gains

AI-Led Solutions (Agentic/AI/ML)

- Agentic AI
- MCP Integrations
- Grounded Knowledgebase
- Grounded Codebase
- AI Automated Metadata Tagging
- Sematic search
- ML Ops
- ML Feature Planning
- ML Data Wrangling
- Data pipeline
- Data Architecture + Strategy
- Document understanding Solution

GTM & Co-Sell Enablement

- Private offerings Support
- VeUP Scorecard
- API Integrations
- Marketplace Sell program
- GTM and DG Services

OUR SALES PLAYS

VEUP

Our Core Delivery Modes

How to use VeUP with your customers regardless of Stage or Industry.

Ignite 'Fire'

We turn cost discipline into competitive advantage, funding your roadmap with the savings we find.

IGNITE 'FIRE'

VeUP Ignite

'Fire' Q1 Promotion

VeUP finds the budget you didn't know the customer had, and uses it to ship the workloads you need to close.

We're offering a limited Q1 promotion with select AWS teams to drive early momentum through **Technical Roadmap sessions**. The promotion follows the standard Ignite resell structure, while incentivising increased AWS consumption and progression into Build or ProServ work.

For customers who complete a Technical Roadmap within their first 3 full months on Ignite, the following options apply:

Customer Benefit Options:

A

5% rebate on the first 3 months of eligible AWS spend under Ignite

OR

B

Up to 10% credit (2× the rebate amount) applied toward Build, ProServ, or POC work

*6-month minimum Ignite commitment required. Full promotion mechanics are documented in an addendum.

VEUP

Simple Criteria for Reps:

01

Qualify ICP & channel: Is it a digital-native SaaS/ISV on AWS, 10k–80k MRR, and AWS-referred? If not, default to standard.

02

Assess roadmap & Build potential: Are there clear projects that could convert into Build/ProServ in 3–9 months? If yes, candidate for promo.

03

Check guardrails: Term commitment agreed, roadmap within 3 months feasible, budget/cohort capacity available. If all green, offer Ignite Promotion; otherwise, position standard Ignite program.

Examples of Customer ICP

Digital-native SaaS / ISV or tech-led business already running core workloads on AWS that is In or approaching growth mode: fundraising milestones, product expansion, or aggressive roadmap for 12–24 months.

AWS Spend/Size band

- Sweet spot: \$20k–\$80k MRR on AWS (roughly \$240k–\$1M ARR).
- Lower bound: \$10k MRR – minimum eligibility where the savings still feel tangible and justifies Roadmap effort.

Organizational fit

- Open to an AWS reseller relationship with at least a 12-month Ignite commitment and willing to invest stakeholder time in a structured Technical Roadmap within the first three full months.
- Has clear modernization, DevOps, data, or AI/ML initiatives, but limited internal bandwidth to execute.
- Fundraising milestone or aggressive roadmap.
- Motivated by cost control and runway extension, not discounts.

Deal and channel fit

- New logo to Ignite, ideally referred by an AWS Account Manager who wants better visibility and a co-sellable plan for 2026.
- Values cost control and runway extension (FinOps mindset) but is equally motivated by funding a roadmap, not just chasing discounts.

How 'Fire' helps AWS Reps

The challenges you face

01 SUs / SMBs / ISVs with \$5M+ AWS spends are "sticky" if you can prove business impact, but they're under-resourced and under-supported by typical partners.

02 AWS wants to move these customers up the value curve (reserved capacity, multi-region, advanced services), but internal SA time is scarce

03 Co-sell motion stalls when partners can't show customers rapid time-to-value.

How we help

ACE REFFERAL AUTOMATIONS

We onboard your referrals at speed, days, not months. Spend-to-build compresses discovery, roadmapping, and early build into 30-90 days.

FINOPS + FUNDING

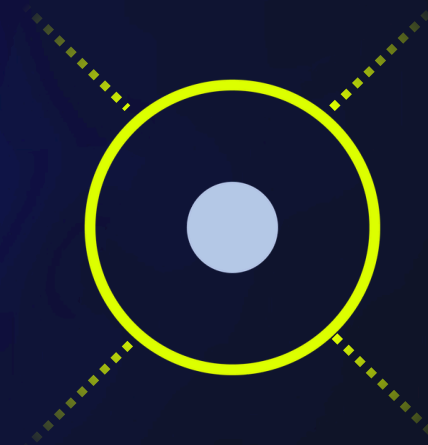

We identify reservation opportunities, committed use discounts, and funding programs (ISV fund, Activate, Migration) you might not have visibility into. Customers expand spend on services with highest margins for AWS.

CUSTOMER STAYS STICKY

Because we front-load the business outcome work (roadmap, funding, cost control), customers don't drift to other clouds or in-house tools. We're not a body-shop reselling T&M hours. We're outcome-focused, which means AWS gets happier customers faster.

MARKETPLACE ENABLEMENT

We accelerate ISV listings and co-sell activation. (Our marketplace team can take an ISV from "interested" to "live and selling" in weeks.)

How 'Fire' helps Customers

The challenges you face

01

To spend enough on AWS to move fast, but control spend so you don't waste runway.

02

Build technically sophisticated roadmaps, but tie them to business milestones (Fundraising, acquisition path).

03

Hands-on help, but not a 6-month consulting engagement eating your budget.

How we help

PHASE 1 - DIAGNOSE

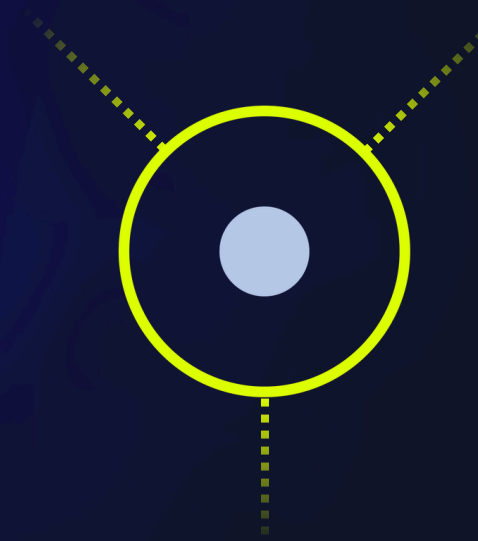

- We identify waste in your AWS spend and hidden funding programs AWS has sitting on the table.
- (Often \$50k-\$500k+ in annual savings or grants already available to you, sitting unused.)

PHASE 3 - KEEP MOVING

Assigned SA + FinOps specialist + Marketplace expertise means you ship faster, not slower.

PHASE 2 - FUND YOUR BUILD

Those savings + AWS funding programs + our hands-on delivery team = zero-to-minimal cost execution of your technical roadmap.

IGNITE 'FIRE'

VEUP

Why lead with Ignite?

1. Outcomes over billable hours

'Fire' ties AWS consumption directly to roadmap delivery, so customers see progress, not just usage.

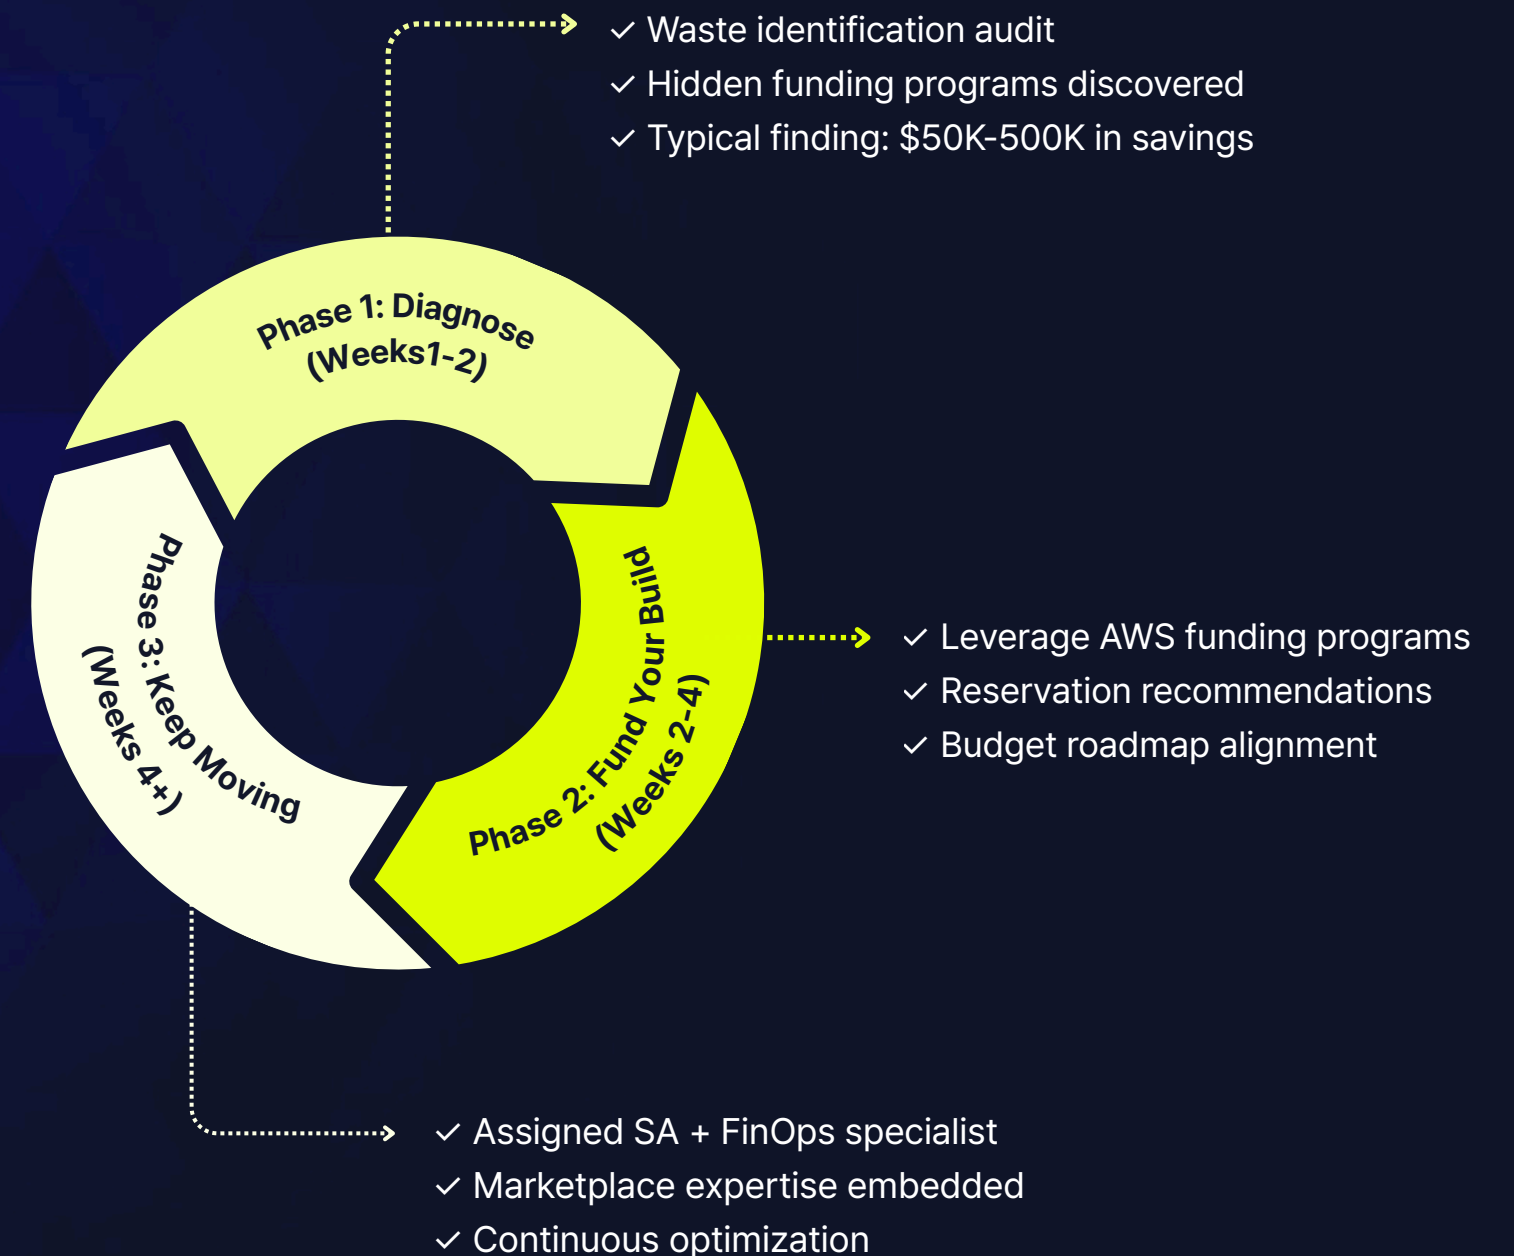

2. Built by operators who know AWS and the business

VeUp's ex-AWS architects and operators align cloud decisions with commercial strategy from day one.

3. Proven path from cost discipline to competitive advantage

For customers spending ~\$1M-\$100M+ on AWS, Spend-to-Build turns cost optimisation into funded, forward-looking delivery.

Archera for reservation automation and PPA Insurance. **Tooling included for zero cost with our managed billing offering.**

Sell 'Pilot'

Purpose-built to help ISVs and SaaS providers scale faster on AWS.

SELL

VeUP Sell Pilot Program

Sell™ is VeUP's embedded AWS go-to-market engine, purpose-built to help ISVs and SaaS providers scale faster on AWS.

Even high-growth ISVs stall on AWS because they lack the specific expertise to navigate the Marketplace, co-sell mechanics, and field relationships. The result is a dormant pipeline and missed revenue.

VeUP Sell bridges this gap by embedding a dedicated Partner Development Manager (PDM) to handle the heavy lifting, from Marketplace listing to co-sell collateral.

For Q1 only, we are offering a limited-time Pilot to fast-track partners from "stalled" to "transaction-ready" in under 60 days at an exclusive discount.

Promotional Pricing Package: \$25,000 (6-12 month program)

Includes:

- Full 8-module acceleration program over 6 months and up to 12 months
- Custom CRM integration
- AWS Marketplace listing, pricing, and packaging
- Embedded PDM support
- Priority access to AWS funding opportunities
- Foundational Technical Review (FTR) support
- 1:1 and workshop sessions
- Templated guidance and frameworks
- Security and compliance guardrails for global products and customers

VEUP

How this helps Reps:

01

Marketplace listing in days, not months

Your customers go live 60-70% faster with dedicated PDM support - regardless of their size or stage. No more leaving interested partners without a path forward.

02

Partner acceleration without any of the lift

We handle FTR readiness, competency alignment, and partner path progression so your partners hit the milestones that unlock ACE opportunities and co-sell motions - without you needing to project-manage it.

03

Quota attainment well before the finish line

Marketplace listings become revenue-generating in ~2 months instead of 6. That's 1-2 net-new opportunities per partner, per quarter, flowing into your pipeline.

04

AWS program access without the qualifiers

Customers receive embedded PDM support and access to a replica of AWS' exclusive Global Passport Program, no matter their size, stage, or spend.

SELL

V E U P

Key Deliverables

What to Expect

AWS Marketplace Foundation

- Optimized AWS Marketplace listing (live and compelling)
- Strategic packaging and pricing framework
- Private offer creation capability

Strategic Co-Selling

- Established AWS Co-Sell GTM process and strategy
- Joint demand generation campaign development
- Multi-partner opportunity acceleration

AWS Tools & Partnership Enablement

- Foundational Technical Review (FTR) completion
- AWS Competency alignment and recognition strategy
- ACE program eligibility and opportunity pipeline

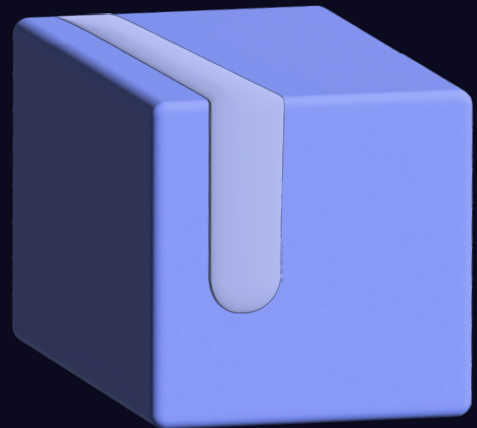

Global Expansion & Growth

- Market analysis and localization strategies
- AWS funding program access and application support
- Product-led growth implementation framework
- Comprehensive performance monitoring and reporting

OUR BUILD™ SPECIALISMS

V E U P

Semantic Media Intelligence

Unlock Petabyte-Scale Content Discovery with AI

Semantic Media Intelligence

Unlock Petabyte-Scale Content Discovery with AI

Buffering, irrelevant content, and fragmented data are killing streaming growth - driving churn while cloud costs spiral.

AI-Powered Media Tagging & Semantic Search

- Dual AI engines (Claude 3 + AWS Rekognition) automatically analyze all video/images
- Natural language search: "Find all content with outdoor scenes and people" → sub-100ms results
- 90%+ reduction in manual tagging labor + 100% metadata consistency

Streaming Infrastructure Optimization

- Intelligent caching (S3 tiering, Glacier automation) reduces CDN costs 40-60%
- Cost-optimized encoding (Bedrock LLM-based bitrate decisions)
- Real-time utilization analytics → proves ROI to finance teams

Recommendation Engine Integration

- Rich metadata feeds directly into personalization pipelines
- MCP protocol + REST API integration with existing recommendation systems
- Drives measurable lift in watch-time, engagement, retention

Semantic Media Intelligence

Unlock Petabyte-Scale Content Discovery with AI

Value for AWS

- ✓ Drives **Bedrock + Rekognition** consumption (100%+ ARR growth typical)
- ✓ **Co-sell motion:** AEs can drop this into “content-driven streaming” deals
- ✓ **Marketplace ready:** VeUP + customer as co-sell partner
- ✓ **High MDF attach:** Media industry = \$\$\$, high-touch accounts

Value for Customers

- ✓ Ship AI personalization in 90 days (vs. 12-month roadmap delay)
- ✓ Owned infrastructure (not vendor-locked to Civit/AWS-only)
- ✓ **Measurable ROI:** X% watch-time lift, Y% churn reduction, Z% cost savings
- ✓ Scale from millions to billions of assets cost-effectively

OUR BUILD™ SPECIALISMS

VΞUP

Fintech Knowledge Assistant

Enterprise AI with 100% Data Sovereignty

Fintech Knowledge Assistant

Enterprise AI with 100% Data Sovereignty

Fintechs need to move faster on AI, but compliance blocks adoption. Sending customer data to third-party AI APIs isn't an option.

100% Data Sovereignty

- Entire AI platform runs in your private AWS VPC - zero external API calls
- All customer data, policies, and compliance docs stay on your infrastructure
- Production-ready in weeks, fully compliant from day one (HIPAA, SOC2, GDPR certified)

Intelligent Knowledge Assistant

- Grounded chat over your policies, product docs, compliance manuals, and procedures
- Multi-model support (Claude 3, Cohere, Titan)- pick the best model for each use case
- Sub-100ms response time with semantic search + vector embeddings
- Citations included so compliance teams can audit every answer

Drop-In AI for Workflows

- **OpenAI-compatible API** = instant integration with existing customer service, internal tools
- Reduce customer support tickets by **50%+** (AI deflects Tier 1 inquiries)
- **KYC/AML automation:** Extract, validate, classify documents at scale with no manual review
- **Employee knowledge assistant:** HR policies, compliance Q&A, product specs available instantly

Fintech Knowledge Assistant

Enterprise AI with 100% Data Sovereignty

Value for AWS

- ✓ Drives Bedrock model consumption (each token = Bedrock token)
- ✓ **Co-sell motion:** Perfect attach to Greenfield/migration deals
- ✓ **Marketplace ready:** White-label version for your ISV customers
- ✓ **Regulatory template:** Referenceable for other FinServ customers

Value for Customers

- ✓ Ship compliant AI in 60 days (vs. 12-month internal build)
- ✓ 50%+ reduction in customer support costs
- ✓ Regulatory approval on day one (SOC2, HIPAA, GDPR by design)
- ✓ Owned infrastructure = 30-50% savings vs. ChatGPT API subscription at scale

Fintech Knowledge Assistant

Enterprise AI with 100% Data Sovereignty

Use Case 1: KYC/AML Automation

- Extract customer documents (passport, utility bill, bank statement)
- Classify and validate against regulatory requirements
- Flag suspicious patterns for manual review by compliance

Outcome: 70% reduction in manual KYC review time

Use Case 2: Customer Support Chatbot

- Ground responses in product docs, fee schedules, regulatory FAQs
- Handle 50%+ of Tier 1 inquiries (account balance, transfer limits, fee questions)
- Route complex regulatory questions to humans with full context

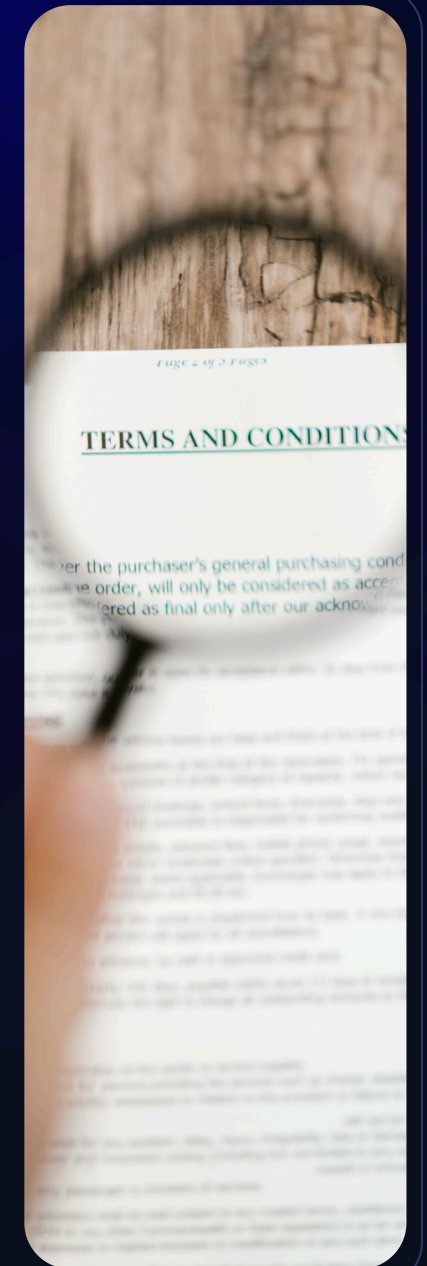

Outcome: 60% reduction in support ticket volume

Use Case 3: Internal Compliance Assistant

- Employees ask questions about FINRA rules, AML procedures, product policies
- AI returns exact documentation with citations
- Compliance team retains audit trail for every answer given

Outcome: 80% faster policy lookup, 100% consistency

Fintech Knowledge Assistant

Enterprise AI with 100% Data Sovereignty

SEGMENT	FOCUS AREA	PROBLEM STATEMENT
Banks	Risk / Fraud / Compliance	"Move fast on AI without compromising SOC2 or GDPR compliance."
Lending Platforms	KYC / AML / Credit Risk	"Automate document review and risk assessment while staying audit-ready."
Insurance	Claims / Underwriting	"AI-powered claims triage + document intelligence for 40% faster resolution."
Payment Networks	Fraud Detection / Support	"AI fraud routing + customer support automation lower chargebacks + reduced ops cost."

VEUP BUILD™ SPECIALISMS

VEUP

IoT Data Volume Predictor

Predict IoT Data Costs Before Deployment

IoT Data Volume Predictor

Predict IoT Data Costs Before Deployment

Unpredictable data costs create bill shock for fleet and logistics teams. When costs can't be forecast, innovation stalls.

Predict Costs With 90% Accuracy

- Plug in your device configuration rules (JSON) → Get daily/monthly data volume forecast
- Sub-second REST API: No more guesswork, just facts
- Includes cellular, bandwidth, and storage cost estimates
- Hybrid ML engine: Combines deterministic rule analysis + ML for accuracy on edge cases

Test-Drive Before Going Live

- Compare 5 different configurations side-by-side: which has best cost/data ratio?
- “What if we enable real-time dashcam upload?” → See cost impact instantly
- “How much will 5,000 new vehicles add?” → Fleet-wide forecasts by region, device type, time period
- Confidence to innovate: Finance approves, teams ship faster

Take Control of Connectivity Spend

- Know costs before deployment, not after bills arrive
- Optimize configurations to maximize data value per dollar
- 30-40% reduction in cellular costs through smarter sampling strategies
- Teams experiment fearlessly—cost impacts are transparent

IoT Data Volume Predictor

Predict IoT Data Costs Before Deployment

Value for AWS

- ✓ Drives SageMaker inference endpoint adoption (pay-per-prediction pricing)
- ✓ Deepens S3 + data lake relationship (training data lives in customer's lake)
- ✓ **Co-sell motion:** Perfect attach to fleet operators w/ existing AWS spend
- ✓ **Reference case:** Repeatable playbook for other automotive/logistics customers
- ✓ **Competitive differentiator:** Beats proprietary (cost + speed of deployment)

Value for Customers

- ✓ Reduce cellular bill volatility by 30-40% through smarter sampling
- ✓ Shipping new features takes days instead of weeks (no cost uncertainty)
- ✓ Finance can forecast connectivity spend accurately for annual budgets
- ✓ Optimize data richness: Collect what matters, skip what doesn't
- ✓ Paid for itself in 2-3 months of savings on first use case

IoT Data Volume Predictor

Predict IoT Data Costs Before Deployment

Use Case 1:
Real-Time Dashcam + Telematics Rollout

Question: "Should we enable continuous HD video upload or edge-processed alerts?"

Predictor: Forecasts \$150K/month (video) vs. \$22K/month (alerts) + accuracy comparison

Outcome: Fleet decides on hybrid approach, saves \$80K/month while keeping safety alerts

Use Case 2: Regional Route Optimization

Question: "Do urban delivery vehicles need same data richness as long-haul trucks?"

Predictor: Forecasts 15 GB/day (urban GPS-heavy) vs. 8 GB/day (highway), 40% cost difference

Outcome: Customize configs by route type, 25% savings fleet-wide

Use Case 3:
New Feature Launch

Question: "Can we ship driver behavior AI without killing our budget?"

Predictor: Current config = \$2.1M/month, new feature = +\$340K/month, approved

Outcome: Team ships feature on timeline, cost impact known upfront
